Welcome!

Follow the following steps to set up your brand new Wave and SmartBell app!

The Pushover Phase: This is to receive notifications from the Wave.
1. Install the Pushover app.
2. Set up your account and check for a verification email.
    a. Your user id will be provided in that email.
3. Click on the link "verify your email address" to enter the Pushover website.
4. Click on the "Help" icon at the top right corner.
5. Type "token" in the search bar and select the first link: How to get a Pushover API or Pushover Application Token
6. Create your own API token and keep a record of it.

The SmartBell Phase: This is to be able to access the livestream
1. Install the SmartBell app.
2. Set up your account.
3. Enter your user id and your API token in your profile page.

You're all set! Now, you will receive notifications when someone is at your door, and to be able to see who it is, enter the "VideoFootage" page on your app, to be able to view the livestream.

Anyone who activates the motion sensor of the Wave will trigger both the sound of a doorbell, as well as a notification to your phone indicating "Someone is at the door."

We wish you a terrific Wave and Smartbell experience!
